Maintenance Performance Toolbox

Tasks

One of the most time-consuming activities for an airline is to manage their maintenance program and task cards. Customizing an existing task card or creating a new task card and keeping them updated with each Aircraft Maintenance Manual (AMM) and Maintenance Planning Document (MPD) revision is a daunting task. Airlines need tools specially designed to optimize task card management processes. The solution—Maintenance Performance Toolbox Tasks module.

Whether you have Boeing, non-Boeing, or a mixed fleet, the Tasks module optimizes job card and maintenance program management. With Tasks module, you can create task cards from multiple sources and incorporate your airline-specific work into original equipment manufacturer (OEM) task cards. You can also create engineering orders from Boeing and non-Boeing Service Bulletins (SBs).

Simplify Customization of Maintenance Tasks

The Tasks module helps you to:

- Create task cards from ab initio, AMM procedure or SB
- Keep job cards in sync with AMM and Boeing task card revisions
- Evaluate an SB for return on investment (ROI) and directly create engineering orders with a single click
- Export task card content for input into maintenance planning enterprise resource planning (ERP) systems
- Print task cards from your maintenance planning ERP

Key benefits

- Eliminate duplicate data entry through synchronization with AMM and Boeing task card
- Reduce turnaround time of revision incorporation

- Sync the release of line and routine cards to end users
- Complement your maintenance planning ERP system

Maintenance Program Management allows your airline to:

- Develop a maintenance program based on the MPD and include airline-specific requirements
- Maintain the airline maintenance program to remain in sync with changes to the MPD
- Simplify the development of a maintenance program to support a new model entry into service (EIS)
- Increase aircraft availability through a customized maintenance program
- Improve regulatory compliance through consolidated maintenance program tracking and reporting
